

ECOS INTERIOR WALL PRIMER APPLICATION INSTRUCTIONS

Recommended For	Use on previously painted surfaces as a smooth and clean bonding finish prior to painting with a topcoat.
Coverage	400 sq. ft. per gallon 100 sq. ft. per quart; 1 coat recommended
Description	Wall Primer is used to provide a bonding, or color transition layer, giving previously painted surfaces a smooth and uniform finish prior to painting with ECOS Paint. Suitable for interior and exterior uses.
Preparation	Surfaces should be clean, dry, sound, and free from dirt, dust, grease, and loose or flaking material. Clean stubborn areas with mild detergent. Rinse and dry thoroughly before painting. Soft or crumbly substrates should be pre-treated.
Application and Clean Up	Under most conditions thinning is not necessary. Stir gently before and during use. Intermix if using multiple containers to ensure color uniformity. Generally only requires one coat. Normally dries to the touch in one hour. Allow twenty four hours before sanding or painting. Can be applied using a good quality synthetic brush; or rolled using a shed resistant 1/4"-3/8" roller cover, or sprayed using an airless sprayer with 0.015" to 0.017" tip at 1600 to 1800 psi. Avoid applying below 50°F (10°C).
